

bringing the games home!

design and build: Aquatics Centre

The Aquatics Centre is where all the swimming events will take place. Like your local swimming pool it needs to be indoors but should also have stadium seating as it is very popular.

Checklist

1. Two 50 metre pools and one diving pool
2. A high diving board
3. Stadium seating around the pools for spectators
4. A roof covering the entire stadium so the swimmers don't get cold!

Here are some pictures to help you:

A. This is a design for the London 2012 Aquatics Centre by architect Zaha Hadid. Look at the shape of the building. What does it make you think of?

B. This picture shows you the seating around a swimming pool.

C. Will the Aquatics Centre also be used by members of the public?
