Stadium Building Kit Instructions

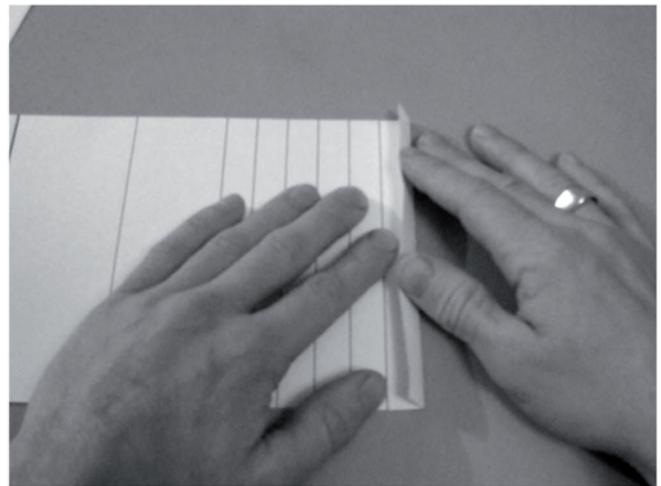

1. Print out the entire contents of the model building kit **onto card** (not paper)

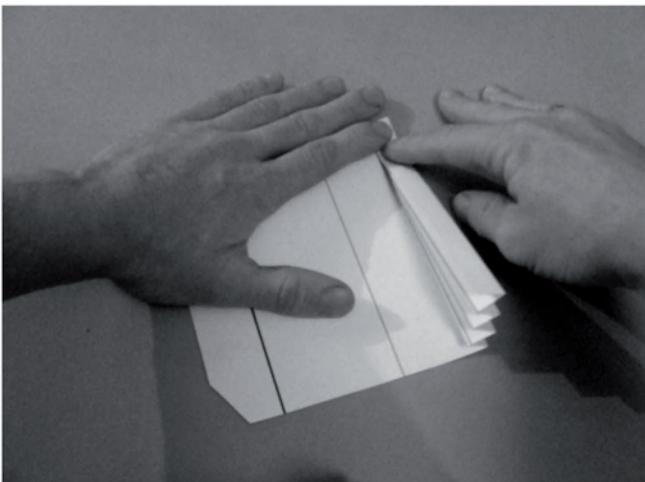

2. Cut out the running track, place onto an A4 card base (1)

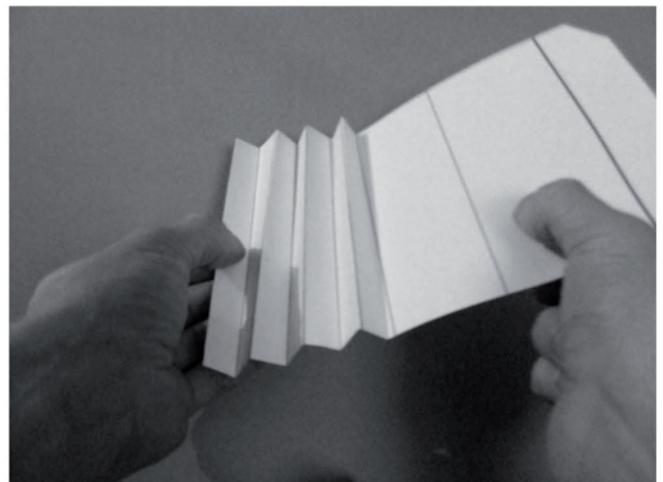

3. Carefully cut out the main stadium seating template (2a, 2b)

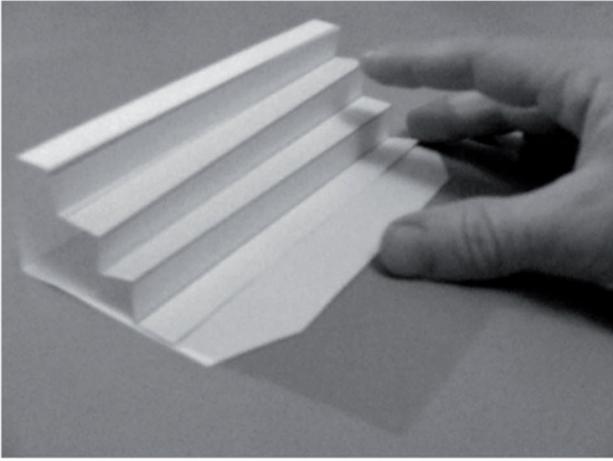

4. Begin by folding the seating along each line. You may find it easier to use a ruler for the first couple of folds

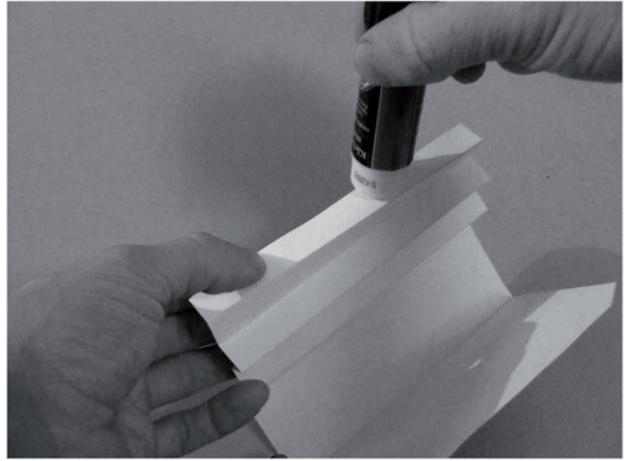

5. Alternate the direction of each fold to give a fan or concertina effect

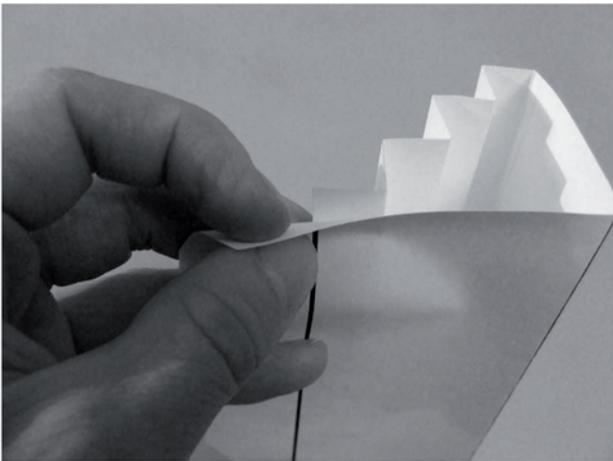

6. When the folding is complete pull the folding out so that it clearly forms seats

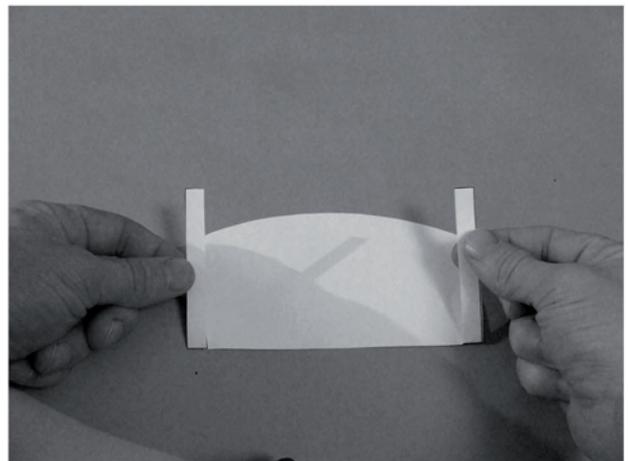

7. Fold the back of the stadium seating round and underneath the so that it will stand up as a unit

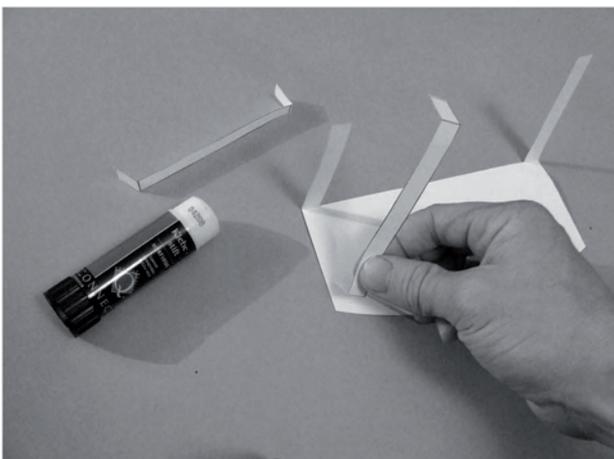

8. Apply glue to the down facing side of the first step

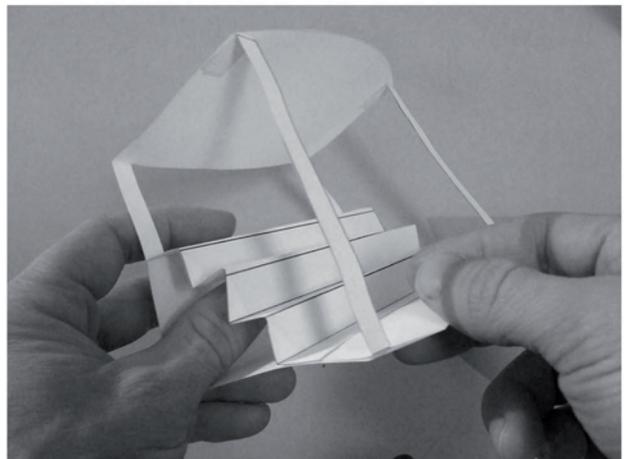

9. Line the front edge of seating up with the thick black line which is on the base of the stadium. Glue and press together firmly. Repeat these instructions for the three remaining seating templates (2b, 3a, 3b)

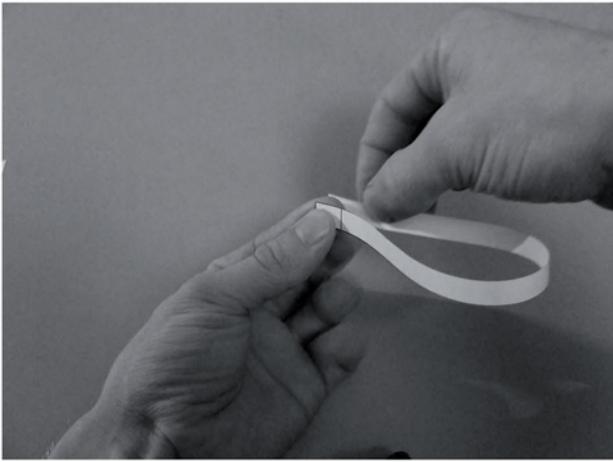

10. Cut out the roof (4a, 4b) of the stadium and fold the supporting columns where they join the roof.

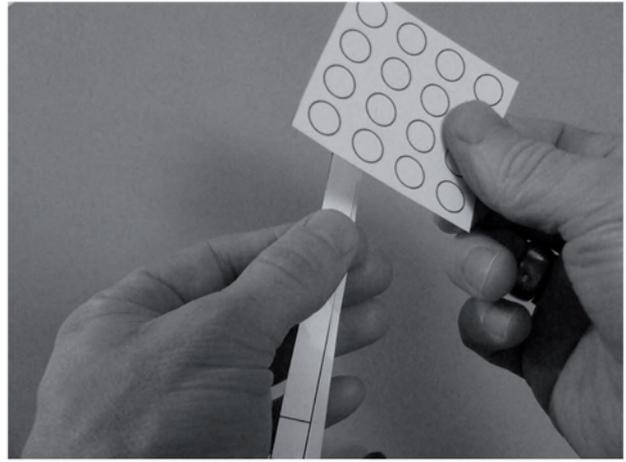

11. Cut out the remaining columns and glue them to the front corners of the roof using the fold over tabs

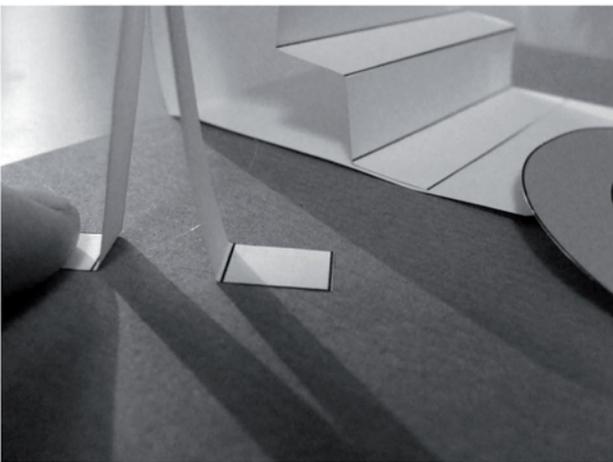

12. Glue the roof to the stadium attaching the rear columns to the back of the seating and front columns to the base using the small fold over tab

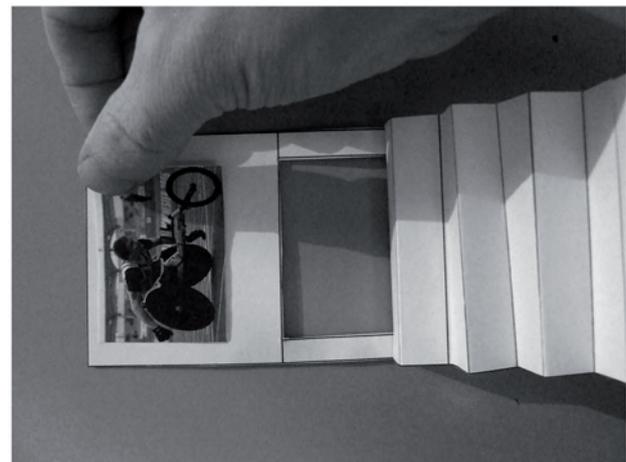

13. Cut out the stands for the flood lighting (5) and fold in half

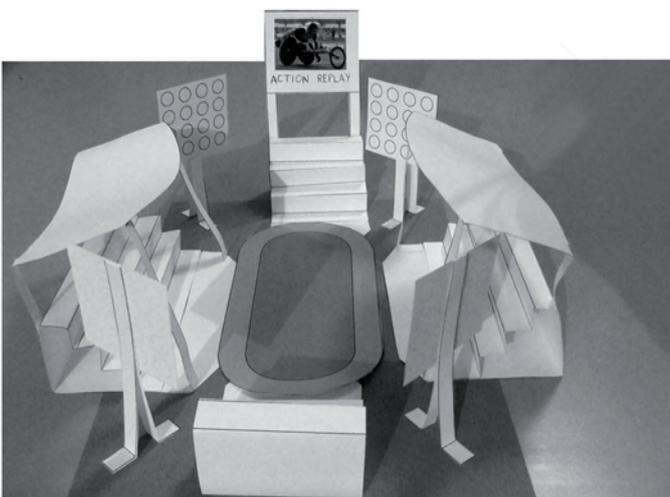

14. Cut out the flood lights and glue them to the stand

15. Splay the legs of the support and attach it to the corner of the baseboard ensuring the light is facing towards the centre of the board

16. The display boards (6) attach to the back of the smaller seats. These can be used as score boards or as an action replay monitor using a separately sourced image

17. Carefully arrange all the component parts of your stadia on the baseboard. Well done if all stands up!
